

Product Planning

Ramin Erfani

May 2014

1 Introduction

2 Product

2.1 High-level product backlog

2.2 Roadmap

The intended planning will be shown below in a brief overview.

3 Product Backlog

4 Definition of Done

The last section of this report will explain in detail when the endproduct can be considered done. This section will particularly handle the DoD of a feature, sprint and release.

4.1 Backlog Items

Within the backlog an item is considered done, when all the checklist points below are true.

- Code complete and approved by lead programmer
- Code satisfies coding standards
- Unit tests written and executed
- Integration system test passed
- Documented

4.2 Sprint

A sprint is considered done, when all the checklist points below are true.

- All sprint items considered done
- Application is tested globally, all unit tests pass
- Integration system test passed
- User tests passed

4.3 Releases

A release is considered done, when all the checklist points below are true.

- The product should pass all unit tests
- Integration system test passed
- Interface looks like the product owner demanded.
- (End)user tests passed
- Code documented and satisfies coding standards.
